

Android File Transfer is dead. So I built my own.

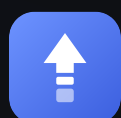

Move files between your phone and your laptop —
over Wi-Fi or a cable. No cloud. No account.

Android

iPhone

macOS

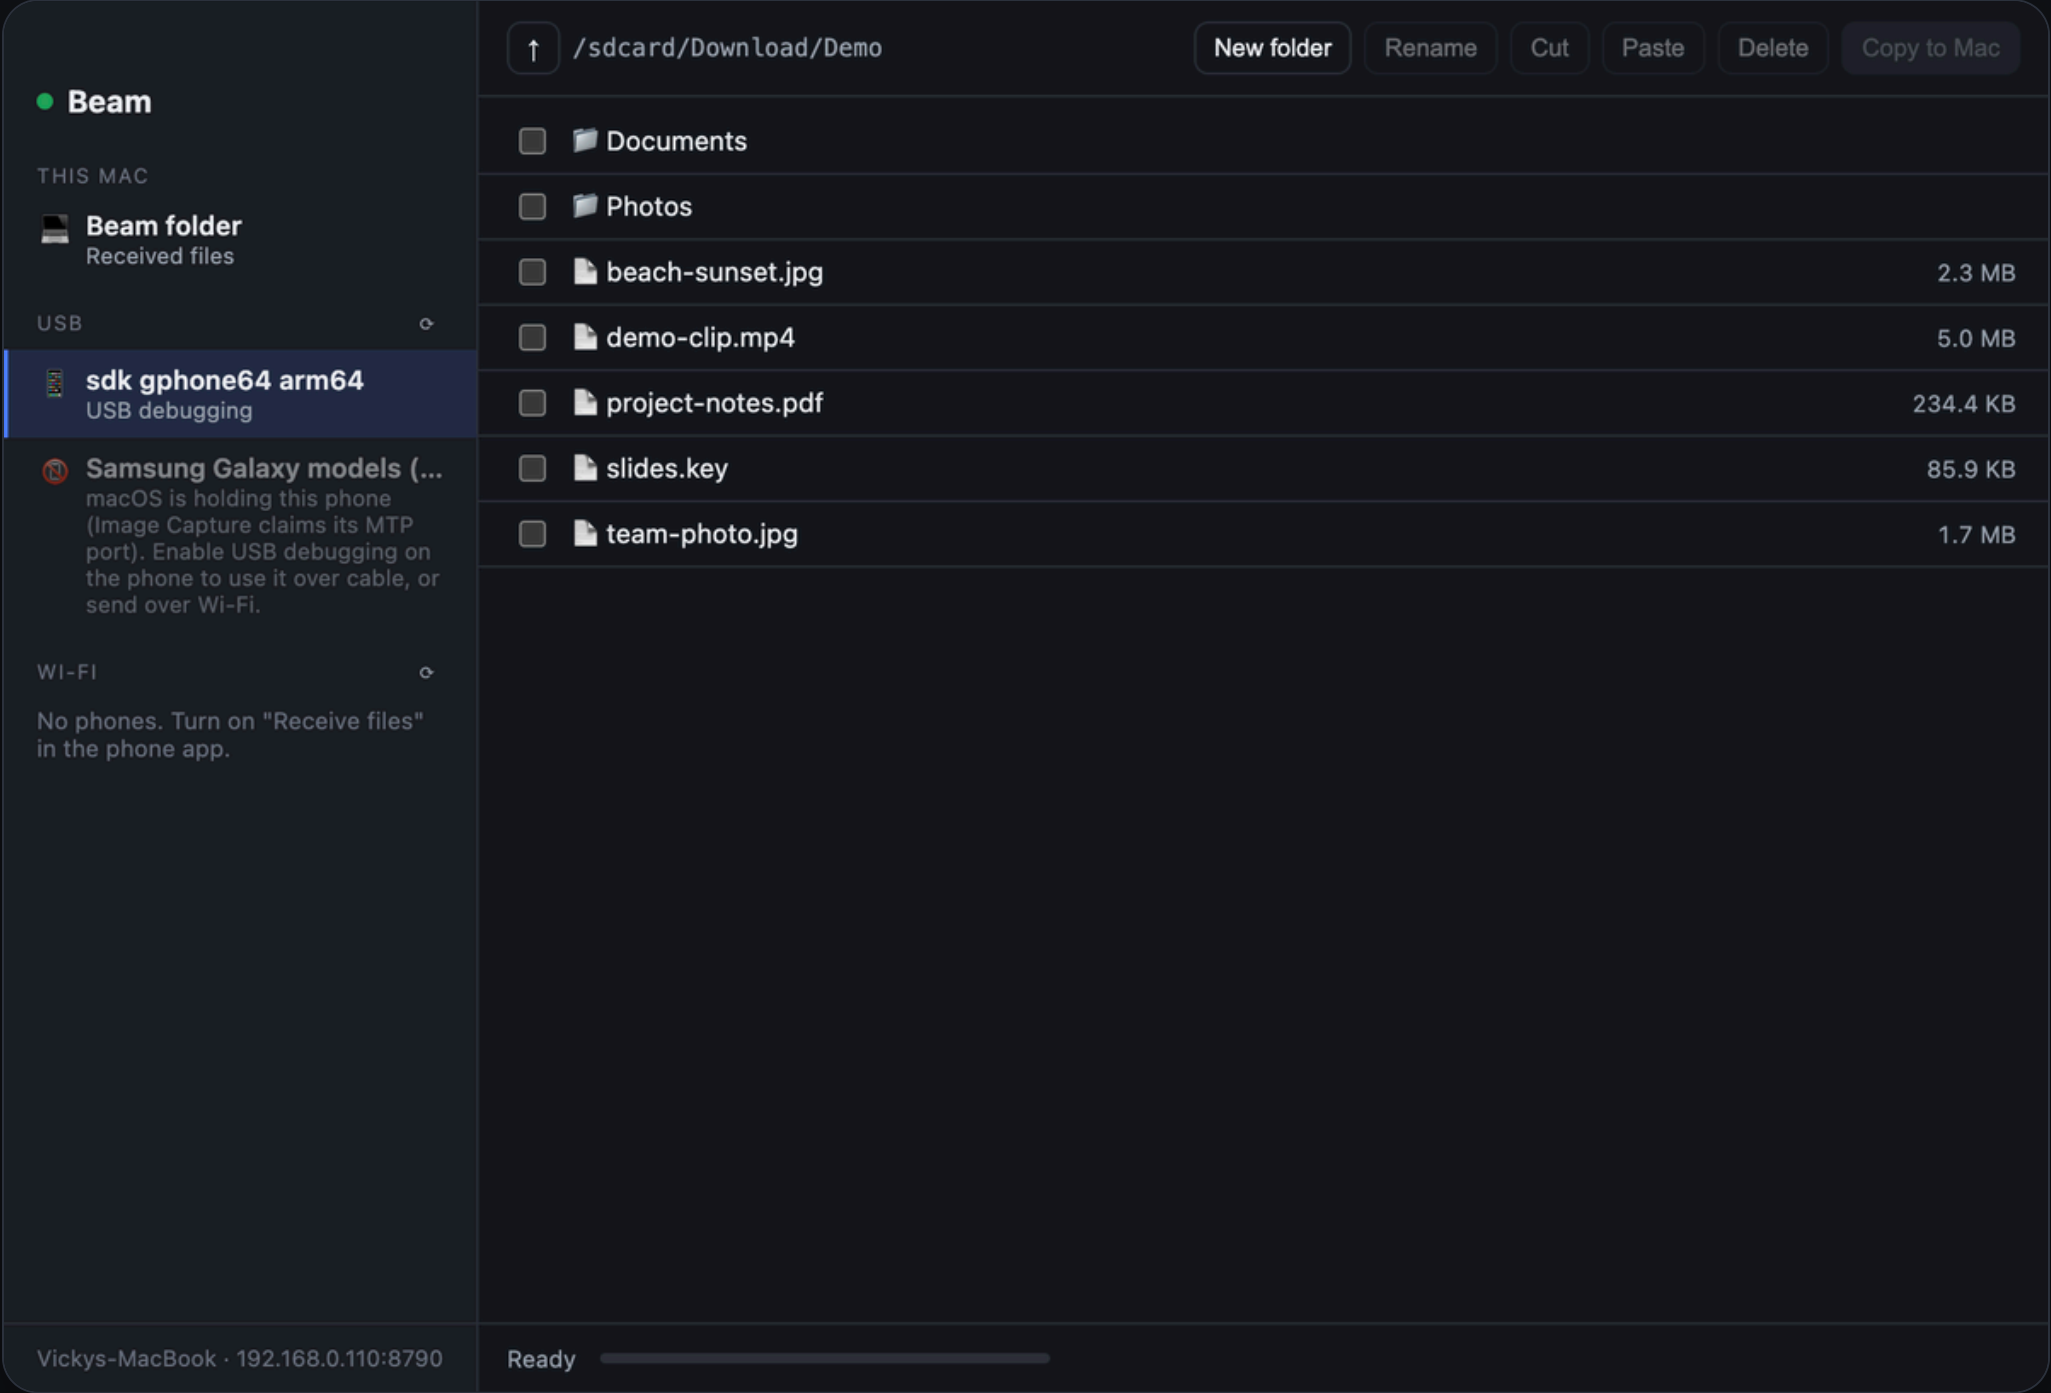

Open source

Beam

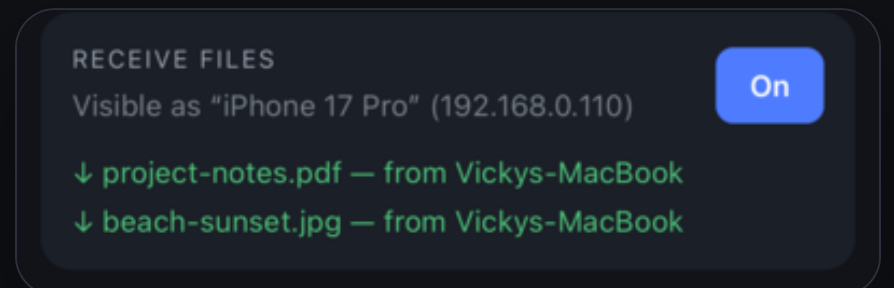

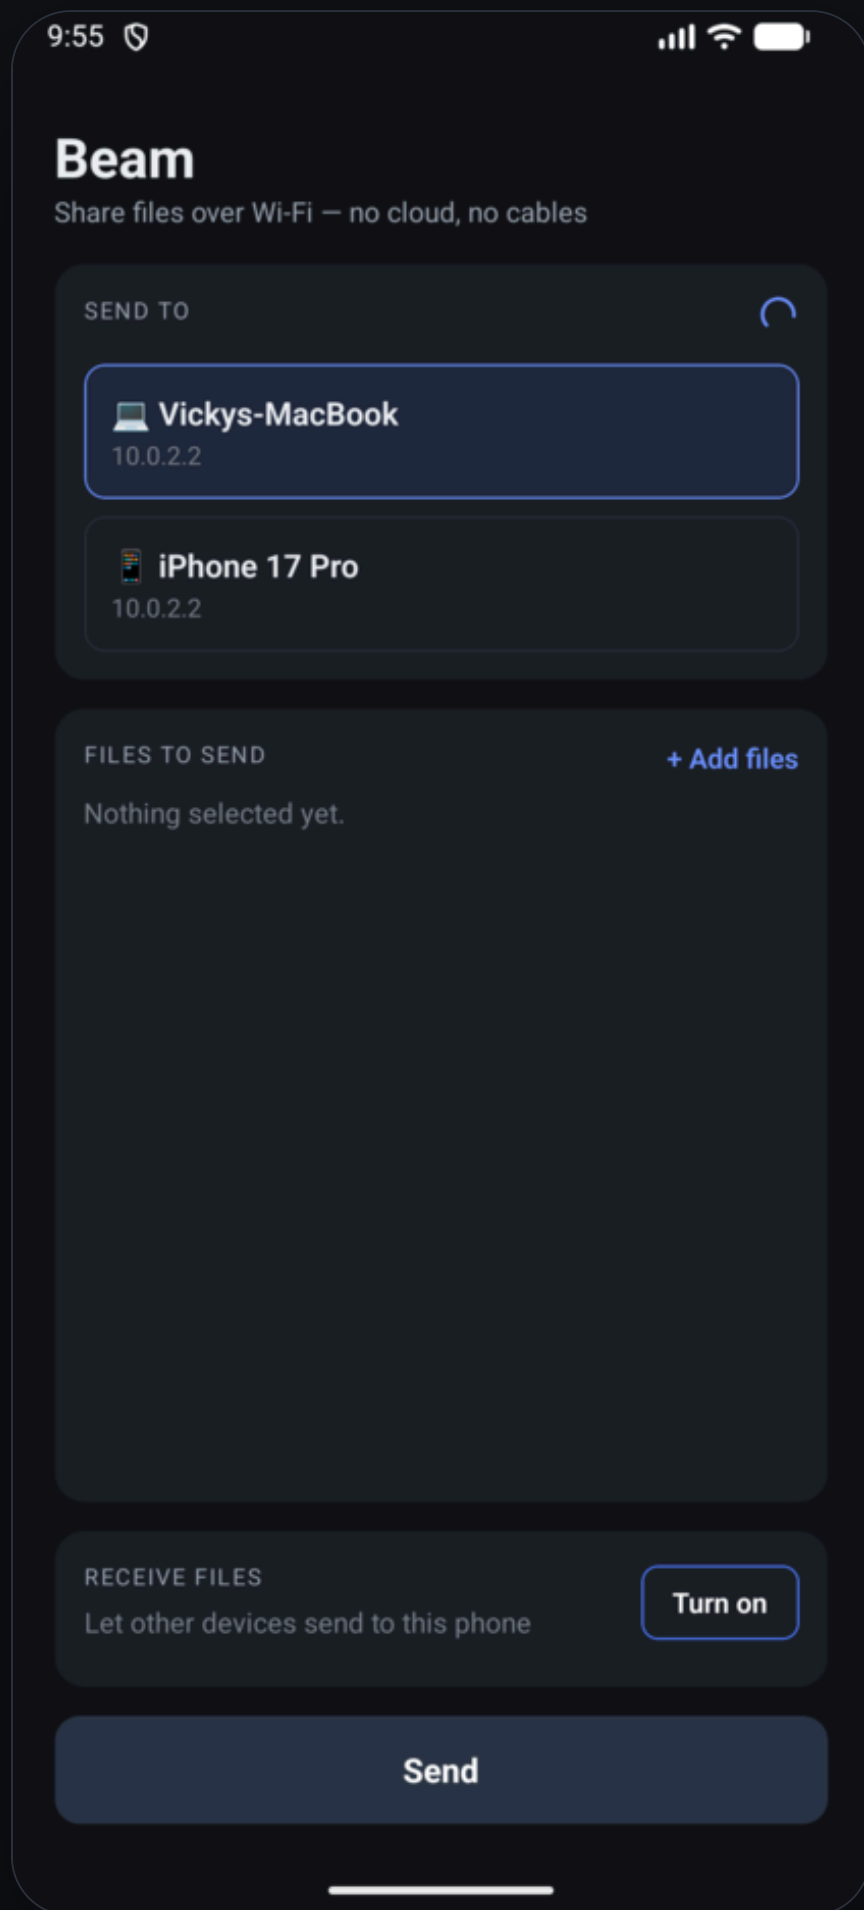

Free & **open source**

Browse your phone like it's a drive.

Create folders, rename, move, delete — and drag files straight into Finder.

Android and iPhone. Both directions.

iPhone — receiving, live

- Send both ways
- No account, ever
- Stays on your Wi-Fi

Android — found the Mac and the iPhone by itself

Beam

No upload limits

Try it today.

Free, open source, MIT licensed.
